PANDORAS BOX MENU

Architectural | Cruise ships | Fixed installs | Live events | Museums

Free and easy download

Do it all with Pandoras Box Menu

It's free! Pandoras Box® Menu is our quick launch app that works seamlessly with the Pandoras Box product suite. With its quick access to the most relevant applications and network or graphics card settings, Pandoras Box Menu connects you to everything you need, including:

- Pandoras Box
- Widget Designer
- Server management app
- Custom apps
- Settings
- File browser
- Network devices and graphics cards—through direct links

Server management

Pandoras Box Menu's server management user interface lets you create your own dashboard to monitor several systems in the network. Sort Pandoras Box hardware based on the location in a space, or by active/backup machines at a live show.

Automatic and remote features

Dive into the system right away and remote control it with the in-built virtual network computing (VNC) capabilities. Enjoy automatic launch capability for fixed installations or in installations with scheduled/timed processes.

Maximize efficiency

Pandoras Box Menu minimizes downtime because it allows you to remotely install software on multiple machines at the same time. You can also simultaneously adapt software settings on multiple machines, and easily track down a faulty system, sort items by IP ranges, and revert to previous versions on multiple machines. Complete tasks quickly using natively implemented batch features and easily monitor system information including IP addresses, hard drive space, and display resolutions.

Supported products

Pandoras Box Menu works seamlessly with:

- Pandoras Box Software License
- Widget Designer
- Pandoras Box Server
- Pandoras Box Compact Player
