

Widget Designer Installer version 6.5.7

Download instructions:

This version includes Blackmagic Design Video hub and Blackmagic Design Atem series into the device configuration. These devices can now be completely integrated into your Widget Designer project.

We also adopted the 'auto-apply' feature into the configuration. We introduced groups for sorting devices and benefit from group scripting and group event listeners, and there is now a search and filter function for devices. We also introduced a grouping for widgets for more comfortable widget group editing as well as group scripting.

The 16-bit fader option for Pandoras Box opacity, color, and alpha parameters has been addressed. While the former command still works and your old projects will keep working on PB as well as on WD side, a new script has been added to directly send 16bit values to these parameters. Widgets and nodes now have an option to send 16bit values to Pandoras Box as well.

Before you begin any firmware/software installation, please ensure that you've read any accompanying documentation. Contact our technical support center or your Christie Sales Manager if you require more information or assistance.

If you want to help us to improve our software, please let us know any issue or feedback at support.pandorasbox@christiedigital.com.
