CHRISTIE®

Software Release Notes

Inspire Series version 1.1.0

This document describes the changes from Inspire Series version 1.0.0 to version 1.1.0.

Affected products

The following products are affected:

- 4K860-iS
- 4k860A-iS

Purpose of release

The primary purpose of this software release is:

- Added new shutter settings features to enhance the smoothness: Fade In and Fade Out.
- Added a customized EDID feature.
- Added size presets for a 21:9 aspect ratio to support 21:9 resolution.
- Added cooling down and powering status returns for RS232 `(PWR?)` command.
- Made updates to the login page.
- Updated to wait for the lens calibration to finish on the web page.
- Fixed issues with the ACM feature.
- Fixed issues with the Mystique integration.
- Fixed issues where items were being greyed out in the web user interface.
- Fixed issues with the ACU Pattern and options not being greyed out.
- Fixed issues with the user interface translations.
- Fixed issues with the on-screen display menu.
- Fixed the following issues:

  - Setting Auto Image Resync to **Normal** and switching 2D Input to **Resync**, a flickering screen was temporarily displayed before being projected.
  - If the Picture Settings was set to **User-High Frame Rat**e when the projector was shut down and you switched to Picture mode and then turn it on again, the setting was changed to User instead of the last set option.
  - In picture-in-picture (PIP) mode, when the Auto option was selected for Adjust Sub Image, the item remained greyed out and could not be used.
  - When the Backup Input was DisplayPort, it automatically switched to the secondiInput after removing the first input and the screen became abnormal.
  - When the parameters in the Blend Area were set to Default, saving the blend memory and then loading it resulted in the incorrect recording of the default values.
