
Software Release Notes

Griffyn Series version 1.3.4

This document provides the changes from Griffyn Series version 1.3.3 to Griffyn Series version 1.3.4.

Affected products

The following products are affected.

- Griffyn Series

Purpose of release

The primary purpose of this release is to provide the following new features and updates:

- Updated the CAVE board revision to report SDVoE support correctly.
- Added the Disable Optimization option to the **Configuration > Geometry Correction menu**. This allows for slower warp encoding to prevent artifacts that may result from more aggressive warps sent from Twist.
- Added the MAC address on the web user interface in the **Communications > Network Settings** menu.
- Moved laser enable controls to the **Service** menu.
- Updated the sensor log storage duration to 30 days.
- Provided minor fixes and improvements over version 1.3.3.

Known issues

This release of Griffyn Series contains the following known issues:

- When using Christie View with DisplayPort in stereo mode, the left eye displays input 1 and 3 and the right eye input 2 and 4.
Workaround: Adapt the Christie View setup to respond correctly to the left/right signal.
- LiteLOC™ performance is compromised when running at low brightness levels (30% or less). Christie does not recommend brightness levels at 30% or lower as laser devices may shut down and colors may drop out.
Workaround: Raise brightness.
