
Technical Bulletin

Upgrading to CineLife+ software package 2.0

This bulletin provides information about upgrading your projector to CineLife+ version 2.0 or higher (once released).

This upgrade contains updates and features provided in the software release notes. Make sure to read the software release notes prior to performing this upgrade.

The following outlines two notable feature updates:

- A new user interface (UI) layout—CineLife+ version 2.0 features a different UI layout compared to CineLife+ projectors using a software package below 2.0.
- Unique user sessions—The new UI allows each user to have a unique user session and have their own view of the UI. Two different users can edit settings on the same page at the same time. When this occurs, the last changes submitted are saved to the projector.

Christie recommends using this new software package and UI as future releases will continue to have this new UI.

Some additional features in the CineLife+ 2.0 upgrade include the following:

- New dynamic UI scaling
- New search feature
- New status dashboard
- New playlist editor fly-out bar
- Updated file upload/download process (directly from the UI)

Affected products

The following products are affected.

- All Series IV Cinema projectors
